## Pigmentation *Laser*.

Our pigmentation laser treatments use advanced laser technology to target and break down unwanted pigmentation within the skin. Suitable for concerns including sun damage, freckles, age spots, post-inflammatory pigmentation, and uneven skin tone, this treatment helps restore a clearer, more even complexion while supporting long-term skin health.

### BENEFITS

---

Improves overall skin tone, overall skin clarity, brightness for a more even-looking skin tone

---

Reduces the appearance of sun damage, sun spots, freckles and other pigmentation concerns

---

Helps reduce the appearance of pore size, congestion and gently exfoliates the skin

---

## Recommended *Treatment Plan.*

Treatment plans are tailored to your skin type, pigmentation concern, and treatment goals following a comprehensive consultation. Most clients require 2–4 laser treatments for noticeable pigment correction and optimal results. More stubborn or deeper pigmentation may require additional sessions.

To maintain results and help prevent pigmentation from returning, 1–2 maintenance treatments per year are generally recommended, together with ongoing sun protection and prescribed skincare.

### RECOVERY TIME

After a pigmentation laser treatment, it is normal to experience mild to moderate redness, warmth, and sensitivity in the treated area for several hours. Pigmented spots may temporarily darken before gradually flaking away over the following 7–14 days as the skin naturally renews itself. Some dryness may also occur during the healing process. To support optimal recovery and results, it is important to follow your clinician's aftercare instructions, avoid excessive sun exposure, and wear an SPF50+ daily to help prevent further pigmentation from developing.

*To help you achieve the best possible results, your clinician will guide you through any required aftercare before your treatment. Comprehensive aftercare information can also be provided ahead of your appointment if desired.*
